

## INSTRUCTIONS FOR USE OF THE PREDICTIVE ANALYTICS SYSTEM FINPROPHET.COM

If you are using this manual you automatically agree to the [Terms and conditions](#) and [Private Policy](#)!

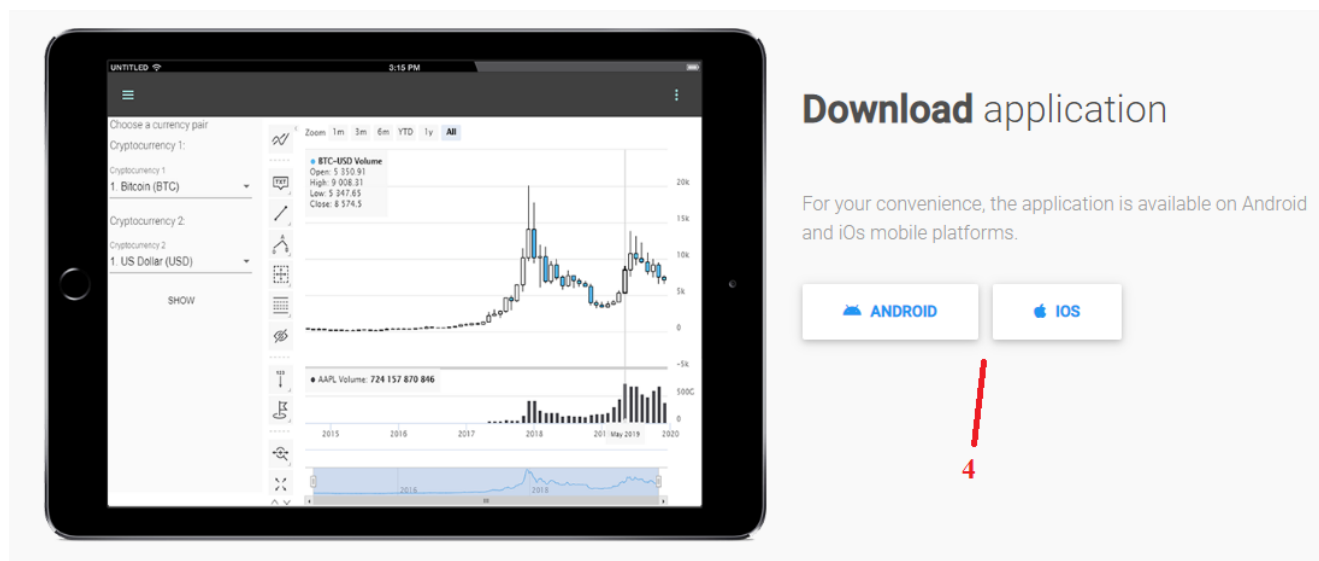

If you want to effectively use the predictive analytics system of international financial markets finprophet.com, please read the instructions for use fully and completely. Reading this instruction does not mean that investing in financial markets is risky, and you should always carefully evaluate, control and understand the investment process with understanding. Finprophet team wishes you victories and a successful investment.

### Step 1. Register (1) and log in (2) in the system

For your convenience, you can choose one of the 38 most popular languages (3). When registering, we do not require or store any data that could uniquely identify you.

If you wish, you can use the mobile application (4), which can be downloaded on the main page finprophet.com.

## Step 2. Look at the system

After authorization, you automatically fall into the "Promotions" section. The menu for switching between sections is located in the upper left corner (5). Also in this menu below you can find the settings and exit buttons. The list of financial instruments is located on the left (6). Next to each financial instrument is a button to add to favorites (7). For the convenience of searching for financial instruments, there is a search bar (8).

Quotes of a financial instrument are located on the right side of the window. **IMPORTANT!** The quotes highlighted in orange (9) are the predicted movement of the moving average. The rest (not highlighted in color) - quotes of previous periods.

For the convenience of analysis, you can use various indicators, which you can add in the upper left corner of the chart (10).

The filter for selecting the displayed dates is located above and below the graph (11).

**IMPORTANT!** The forecast switching button (12) is located in the upper right corner of the window. You can switch between short-term and medium-term forecasts. The medium-term forecast is calculated for a period of 150 working days (about 8 months). The short-term forecast is calculated for a period of about 2 weeks (the period varies depending on the exchange).

### Step 3. Connect access to forecasts and recommendations

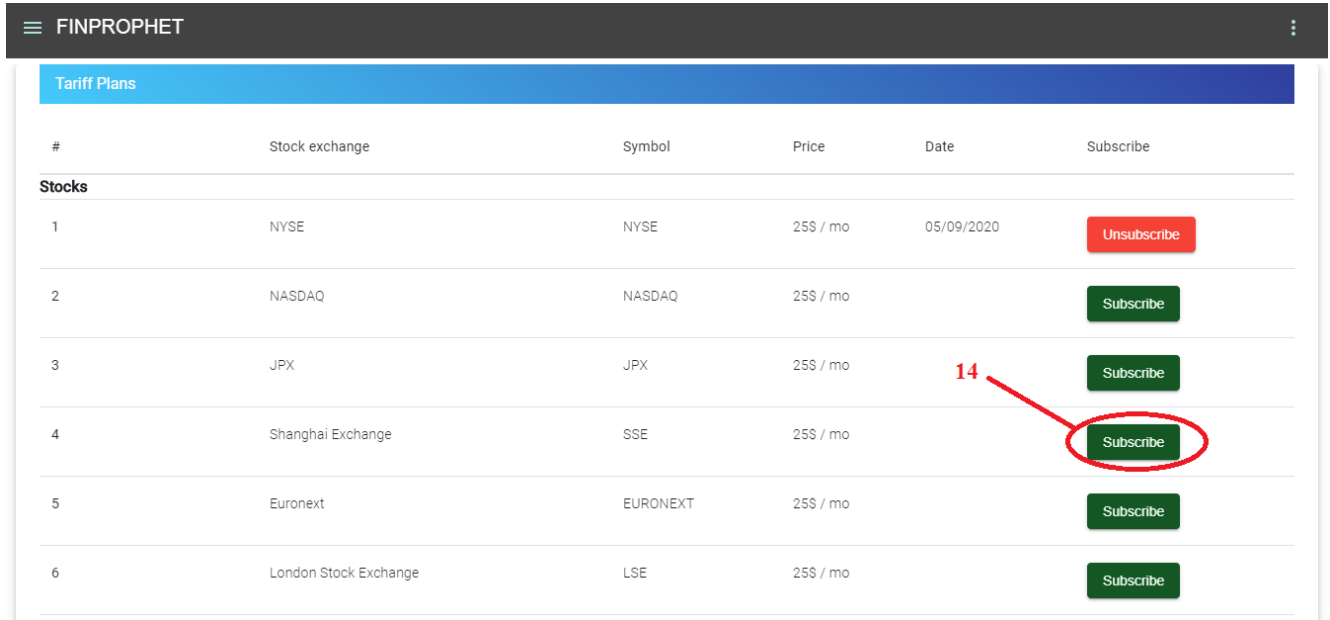

By default (in demo mode) you can view quotes of financial instruments and use indicators. To get a forecast for one or another financial market and instruments you need to get access. To do this, go to the “Subscription” section (13).

**Web:** <http://finprophet.com>

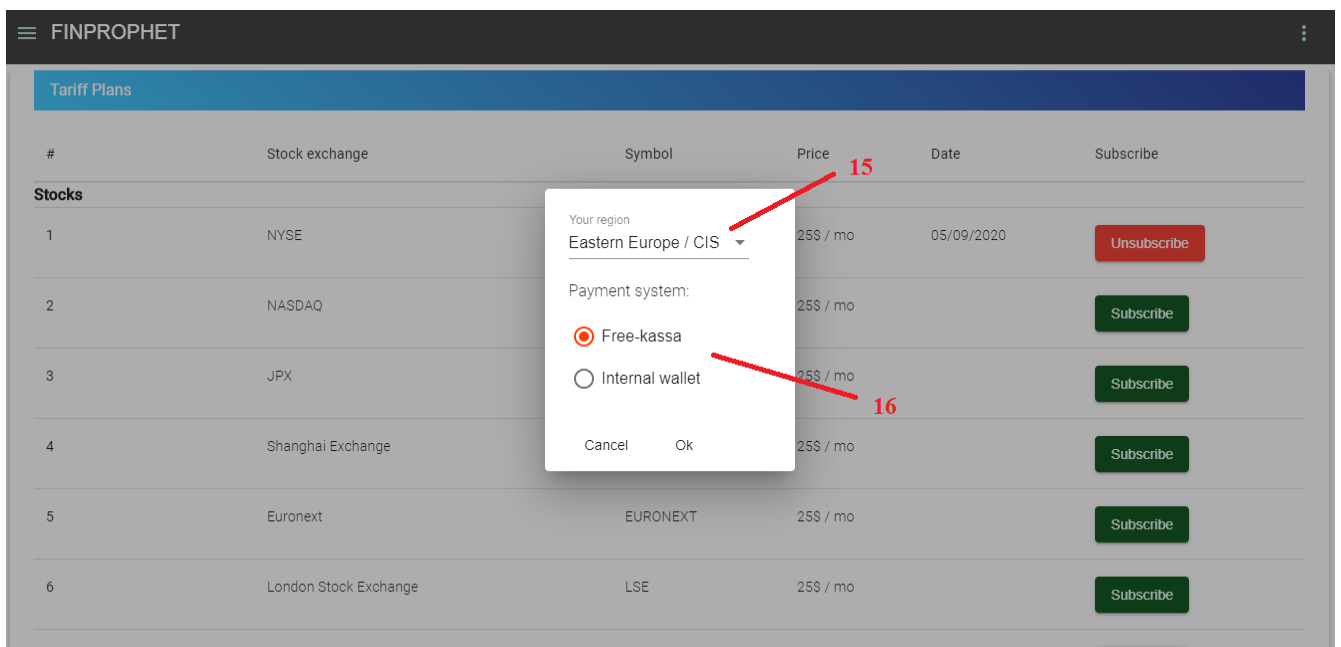

**Mail:** [info@finprophet.com](mailto:info@finprophet.com)

Select the desired financial instruments and markets whose access to the forecast you want to receive and click the “Subscribe” button (14).

#	Stock exchange	Symbol	Price	Date	Subscribe
<b>Stocks</b>					
1	NYSE	NYSE	25\$ / mo	05/09/2020	Unsubscribe
2	NASDAQ	NASDAQ	25\$ / mo		Subscribe
3	JPX	JPX	25\$ / mo		Subscribe
4	Shanghai Exchange	SSE	25\$ / mo		Subscribe
5	Euronext	EURONEXT	25\$ / mo		Subscribe
6	London Stock Exchange	LSE	25\$ / mo		Subscribe

Choose your region (15) and payment system (16). If you have previously replenished the internal wallet of your account, you can select “Internal wallet” for payment.

#	Stock exchange	Symbol	Price	Date	Subscribe
<b>Stocks</b>					
1	NYSE	NYSE	25\$ / mo	05/09/2020	Unsubscribe
2	NASDAQ	NASDAQ	25\$ / mo		Subscribe
3	JPX	JPX	25\$ / mo		Subscribe
4	Shanghai Exchange	SSE	25\$ / mo		Subscribe
5	Euronext	EURONEXT	25\$ / mo		Subscribe
6	London Stock Exchange	LSE	25\$ / mo		Subscribe

If you have a promotional code, then you can enter it in the same section at the bottom of the window.

CHECK

#### Step 4. Choose financial instruments for investing

**IMPORTANT!** You must always remember the risks, your portfolio must always be diversified! Always set a stop loss and protect yourself from losses.

In the finprophet.com system, you have 2 directions for selecting investments:

1. Manual, based on the forecast data for the moving average quotes of a financial instrument.
2. Automatic, using the "Strategy" section.

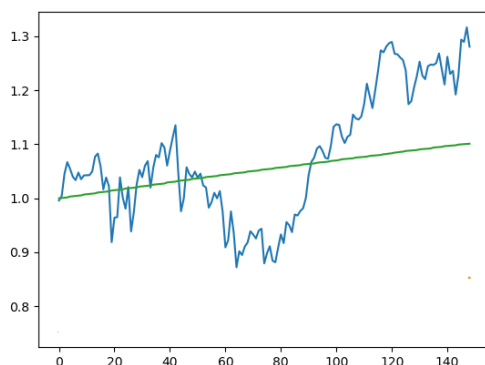

When using the recommendations section, you can see potential for various financial instruments:

- profitability;
- investment strategy: buying, selling or sideways;
- entry and exit points.

FINPROPHET									
Search									
Nº	Name	A.type	Symbol	Strategy	Profit. %	Start date	Starting price	Final date	Final price
1	Berkshire Hathaway Inc.	middle	BRK-B	flat	30.9508	03/04/2020	178.977	06/11/2020	234.372
2	Berkshire Hathaway Inc.	short	BRK-B	buy	12.6205	03/04/2020	181.293	26/05/2020	204.173

9	Citigroup Inc.	middle	C	flat	50.7126	03/04/2020	48.5077	06/11/2020	73.1072
10	Citigroup Inc.	short	C	buy	39.6072	03/04/2020	43.681	26/05/2020	60.9819

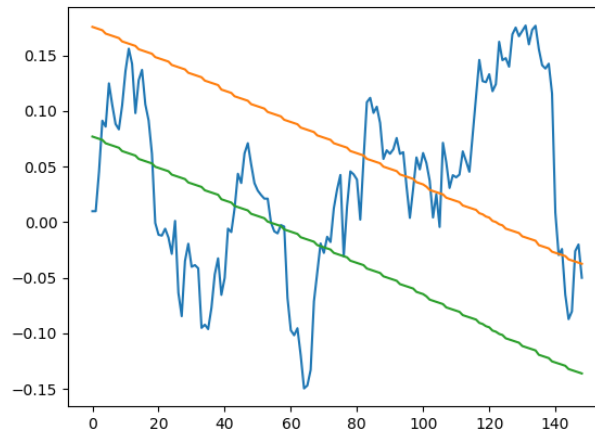

When using finprophet.com, it is IMPORTANT to understand how the forecasting system works:

1. In approximately 60% of cases finprophet.com correctly determines the movement vector of the closing price over the entire forecast period. For the medium-term forecast - it is 150 days, for the short-term - about 2 weeks.

*Example of the result of calculating the movement of ACN stock quotes on a daily chart using python / keras*

2. In approximately 30% of cases finprophet.com correctly determines the price movement vector in a certain temporary projected area. As a rule, in this case, the forecast for 30% to 60% of the time period is correctly determined (i.e., for the daily chart, this is from 45 to 90 days).

An example of the result of calculating the movement of stock quotes MMM on a daily chart using python / keras

3. In about 10% of cases, the vector of price movement is determined incorrectly.

Finprophet.com uses the Keltner channel with parameters (49, 18, 3.2) to calculate potential profitability, as well as determine entry and exit points.

Given the use of the Keltner channel, it was assumed that with a sideways (flat) financial instrument is traded across the entire width of the channel, with growth (buy

strategy) is traded at the top of the channel, with a fall (sell strategy) at the bottom of the channel.

Thus, the entry and exit points (in the ideal case) for various strategies are as follows:

1. Sidewall: entry and exit - lower or upper boundary of the channel (depending on the situation).

**IE:** if you see that for a sideways strategy your price has gone beyond the entry and exit point ranges, then you can buy and sell accordingly.

2. Growth: entrance is the middle line, output is the upper part of the channel.

**IE:** if you see that with the purchase strategy the current price of the instrument fell below or is at the level of the entry point, you can buy the instrument, if the price is at the level of the exit point or above it, you can sell the instrument and take profit.

**IMPORTANT!** Trading strategies and forecast quotes are constantly updated. Therefore, you need to constantly monitor them. You must understand that the forecast can be adjusted in any direction. Growth can be continued, as well as various circumstances can lead to a change in the trend vector.

3. Fall: entrance is the middle line, exit is the lower part of the channel.

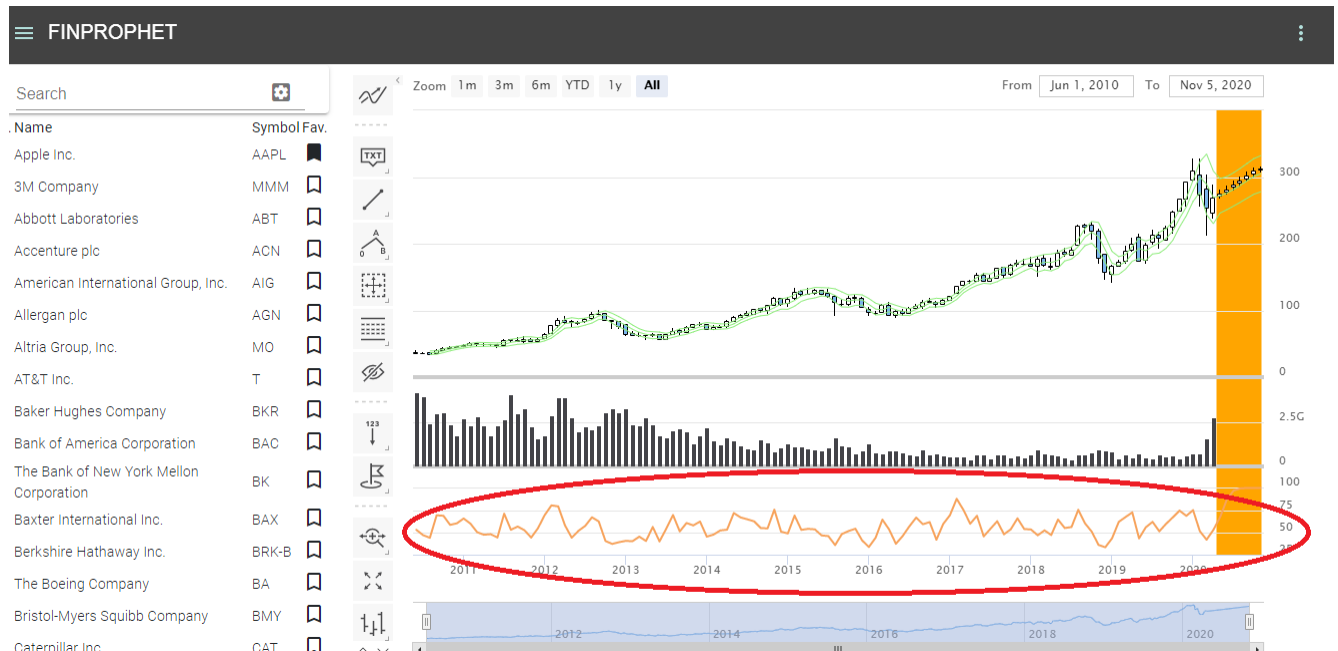

**IE:** if you see that with the purchase strategy the current price of the instrument is above or at the level of the entry point, you can sell the instrument, if the price is at the level of the exit point or below it, you can buy the instrument and take profit.

**IMPORTANT!** Trading strategies and forecast quotes are constantly updated. Therefore, you need to constantly monitor them. You must understand that the forecast can be adjusted in any direction. The fall may continue, as various circumstances may lead to a change in the trend vector.

**IMPORTANT 2!** In some cases, quotations of financial instruments may go beyond the channel. In this case, the channel boundary may be the optimal entry point. It is important to understand that in this case you have risks in the event of a trend change. Therefore, be careful.

## Step 5. Add additional indicators

For your convenience, you can use various indicators, for example, RSI.

**IMPORTANT!** We recommend that you always take a reasonable approach to the analysis of the quotation vector of a financial instrument, and use various additional means of confirmation and verification of both a technical and fundamental nature.

**IMPORTANT!** At the moment, finprophet.com cannot see global events leading to dramatic changes in the price movement of both a financial instrument and the market as a whole. Therefore, we strongly recommend a reasonable approach to the issue of risks when certain events occur. We strongly recommend that you independently monitor the analytical and news background of the financial markets and financial instruments that interest you.

*Successful investment,*

*best regards*

*Finprophet Team!*
